

CERTIFICATE

Druckpräparation+

A PROCESS BY MOOSMOOS MANUFAKTUR

This certificate has been issued to recognise the uniqueness of the
MOOSMOOS Druckpräparation+.

- 01 LIGHTFAST COLOUR FOR LIFELONG COLOUR BRILLIANCE**
Druckpräparation+ dyes the moss in its entirety, achieving a deep, thorough colouring of the ball or flake. This guarantees colour brilliance, and the moss retains its radiant colours for a lifetime.
- 02 NATURAL HYGROSCOPIC HUMIDITY REGULATION**
Druckpräparation+ preserves the natural hygroscopic property of the moss. The moss can therefore absorb and release moisture from the air and regulates the indoor climate in a similar way to nature.
- 03 INDOOR CLIMATE REGULATION THROUGH VAPOUR PERMEABILITY**
Thanks to its vapour permeability, which is retained by Druckpräparation+, the moss actively contributes to regulating the indoor climate. It enables the exchange of moisture and thus reduces the formation of condensation and mould.
- 04 INSECT RESISTANCE THROUGH SALTS**
Druckpräparation+ includes the application of salts that give the moss a natural resistance to insects. This ensures that the moss pictures are protected against harmful insect infestation.
- 05 COMPLIANCE WITH ALL BUILDING-PHYSICS REQUIREMENTS**
Despite the application of Druckpräparation+, MOOSMOOS moss pictures continue to meet all building-physics requirements. They comply with the applicable regulations and standards regarding fire protection and other relevant requirements.

It confirms that, owing to this process, the products manufactured offer lifelong colour brilliance, natural hygroscopic humidity regulation, indoor climate regulation through vapour permeability, insect resistance through salts and compliance with all building-physics requirements.
